HOW TO IMPORT/EXPORT

It's a great time to be in the import/export business. Opportunity abounds.

If you have an ability to sell, and an air of diplomacy, import/export is a great way to build up a successful business from nothing and have fun doing it. Not only does it require little financial investment to start, but it offers the prestige of working with clients from all over the world. You don't need previous experience in the field, but you should have a good head for organizing. Fulfilling a successful import/export business requires constant attention to little details. Do you like the idea of running your own business? How would you like a tax deductible trip to foreign places a couple of times a year? The advantages of an import/export business are great.

Do you know some local manufacturers looking for ways to increase their market for the goods they make? As you progress in the business, many factors become obvious and easy to handle. For example, you'll need to find a person to handle shipments, called a freight forwarder. And you'll need to create solid contacts and strong relationships with reliable suppliers.

The goods that do find foreign markets are exports. Anything that is manufactured outside the country and brought in for sale is imported. Although it seems obvious that all manufacturers would want a worldwide market, it is not easy for a company that is limited in its scope and abilities. That's where you come in. An import/export agent is a matchmaker. The agent's commission is generally about ten percent. Ten percent of \$500,000 or ten percent of a million is not a large order if you're brokering machinery, raw materials, or computers. The market is unlimited and there are hundreds of manufacturers looking for foreign distribution. Sporting goods, socks, electronic games, whale meat, housewares, scrap metal, power tools—anything can be readily imported or exported if there is a consumer demand and if you can get the products.

Governments encourage exports. Indeed, it is those sales that keep a nation's balance of payments with the vast amounts of goods that are imported. And you'll find government agencies helpful in establishing your business.

You can start your import/export business at home with a telephone. You'll need a file system, business cards, and a machine to answer phone calls. Once you get going, you'll want a cable address or a telex hook-up. And you'll need a classy letterhead. Until you establish personal contacts, it is your letterhead that represents you. Make it look professional, possibly embossed or two-color, or gold leafed. Have it printed on light-weight paper for airmail correspondence.

More than office equipment, you need the determination to make it work.

THE HARMONIZED SYSTEM CODE FOR EXPORT AND IMPORT

You will have to learn about the way articles for import/export are codified. The Harmonized System Code was created by the World Customs Organization (WCO) to categorize goods into approximately 5,000 commodity groups, used in the service of import/export by more than 200 countries worldwide.

It is also known as the HS code or HTS—the Harmonized Tariff Schedule code.

The classification system of the HS code can be confusing. It contains 2 digit, 4 digit, 6 digit, 8 digit and 10 digit codes, in greater degrees of specificity. For example, HS code 01011 designates PUREBRED BREEDING under heading 0101 (HORSES, ASSES, MULES AND HINNIES, LIVE) under the chapter 01 (LIVE ANIMALS). In addition, each country can modify the code by adding two digits or four digits as per their requirements without changing first six digits.

If seasteading feels like old news, it's because it is. Private corporations and the wealthy have been building independent enclaves upon the waves for at least the past half-century. Royal Caribbean, who run their "own private paradise" on the Haitian peninsula of Labadee is just one example. Royal Caribbean is "one of Haiti's largest foreign investors." They spent \$50 million developing Labadee. After the 2010 earthquake that destroyed Port-au-Prince, RC continued to bring tourists to Haiti. The company was, according to a spokesperson, "very sensitive to the idea of delivering a vacation experience so close to the epicenter of the earthquake," but decided to continue to dock in Labadee as scheduled. Over 700 Haitians are directly "impacted" by Royal Caribbean, it turns out. Supported? No. Impacted. By which they mean Haitians in Haiti. [DG]

These are the little fish that we should consume if we want eat the ocean better. They are prolific and breed early in their short lives. The Peruvian anchoveta (*Engraulis ringens*) is the largest single fishery in the world. But 98% goes to reduction industries that pulp the fish into fishmeal and fish oil to feed pigs and chickens, and fish. Fish that feed fish. Nearly half of Peru's children suffer from malnutrition, fed on potatoes instead of protein-rich anchovies. Seen as trash food, no one wanted to eat them until Patricia Majluf from CSA at the Universidad Peruana Cayetano Heredia teamed with an artist and a chef in a campaign to promote Anchovies for the World. Now kids eat them because they look as good as they taste. Anchovies are cool. Eat fish, not fishmeal. [EP]

60,000 containers are shipped into the U.S. on gigantic freighters every day.

Customs and Border Protection officials scanned with X-ray or gamma-ray machines 473,380—or 4.1 percent—of the 11.5 million containers shipped in the fiscal year.

Gamma Ray scanners kill stowaways before you know they're inside those metal boxes, I heard a port guy somewhere say; it happens "often enough," and deserved a shrug of the shoulders: it's somewhat incidental. [MZ]

<p>Asbestos, Quebec, Canada is the site of a “massive open-pit mine [. . .] deep enough to swallow the Eiffel Tower” (Ingrid Peritz, <i>Globe and Mail</i>, Sept 20, 2012). Its Jeffrey mine was finally closed in August 2014. However, “Pipes containing asbestos are being installed in new condominiums, hospitals and high-rises in Canada, despite widespread health concerns that have led many countries to ban its use.” (Tavia Grant, <i>Globe and Mail</i>, June 27, 2014). 930690-0040 BOMBS, GRENADES, TORPEDOS, MINES, AND SIMILAR MUNITIONS OF WAR, AND OTHER AMMUNITION AND PROJECTILES

Why is this allowed? Munitions of war, bomb, grenades, torpedoes, etc should be banned and the resources spent on weapons of mass destruction should be redistributed to organic farming, biodiversity, education and health. We can't afford to subsidize the military industrial complex any longer. [RW]

930690-0040 BOMBS, GRENADES, TORPEDOS, MINES, AND SIMILAR MUNITIONS OF WAR, AND OTHER AMMUNITION AND PROJECTILES

The Baltic Sea has been militarized for centuries, from the Vikings on down. In the twentieth century, this sea was only a small wet caesura between east and west. When they decided to dump the chemical weapons in the 1950s most of it happened by loading up entire ships with the missiles and bombs and canisters and sinking them, Battleship-style. This is what they did in Bornholm, and off the coast of Norway. In Gotland, though, it was more like Hansel and Gretel—dropping the toxic crumbs, one after another, over the side of the boat. From Liepaja and back? Were they trying to make a pathway home? Did they already know that they were lost?

“The war” is in the past, but I forget about the depth of this past, and the palimpsest of its detritus. [AN]

<p>As marine traffic increases every year, so does a concern. The dramatic rescues. The too-frequent drowning deaths. The countless migrants seeking passage to a better life via a short spell on an ocean wave. Typically left to drift or drown if encountered on an international waterway, detained and deported if taken within territorial waters. There are exceptions: one weekend in June, British and Italian navy ships, staffed by mariners wearing hazmat suits, rescue over 3500 migrants who had taken to the Mediterranean waters in unsuited wooden fishing boats and rubber dinghies. The HMS Bulwark, a British ship, rescues more than 1,000 migrants, including 10 pregnant women.</p> <p>All machinery can be sinking machinery (843041) when mixed with the right proportions of Sea Water (250100) and Skins and Other Parts of Birds With Their Feather or Down, Feathers (670100). 060312-0000 CARNATIONS, FRESH

Yotam left me six carnations the morning he left New York to Quito. They are: pink, orange, yellow, red, ugly. The carnations probably came from Columbia by way of the Caribbean Sea and then the Atlantic in five days and ten hours or more. They're in an old pasta sauce jar, probably from Mexico. They are half wilted but smell nice and will probably continue to do so until he gets back. When he gets back I will probably throw them away. [RS]

160432-0000 CAVIAR SUBSTITUTES PREPARED FROM THE EGGS OF FISH OTHER THAN STURGEON

Some insist there is no substitute for the eggs of sturgeon. The Russian for caviar is *ikra*, meaning fish roe. For the nations (Russia, Iran, Kazakhstan, Azerbaijan and Turkmenistan) that hug the Caspian Sea from where 90 percent of the world's black caviar comes, the roe can only be that of sturgeon. Of the 25 species of sturgeon, beluga is most endangered. Quotas set by the Convention on International Trade in Endangered Species of Wild Fauna and Flora (CITES) try to regulate international trade but the black market for black pearls thrives. A very political fish: sturgeon might have preferred life in the USSR. With the crumbling of the Soviet empire, fishing controls fell to the greed of the oligarchs. Poverty used to restrict fertilizer for crops. Now plentiful, it asphyxiates the Caspian Sea. Jellyfish thrive as the sturgeons die. [EP]

Last year I visited the Lake of Seven Colors in Bacalar, Mexico. I strained to differentiate the exact shades, trying to find the line where a hue ended and a new color began, trying to account for all seven. Each shade reflected the sky and the clay and the other sediment, and also indicated depth. The deepest purple. Mauveine or Perkin's mauve, was the first synthetic chemical dye. With its invention, came a democratization of color and an aesthetic intensification of the world. After that, anyone, given the right chemical knowledge, could create a color lake. [HD]

	MS Freedom of the Seas is a cruise ship operated by Royal Caribbean International. It is the namesake of Royal Caribbean's Freedom class, and can accommodate 3,634 passengers and 1,300 crew on fifteen passenger decks. Freedom of the Seas was the largest passenger ship ever built (by gross tonnage) until construction of the Royal Caribbean International's Oasis-class ships in 2009. For its first cruise and maiden voyage on June 4, 2006, MSFotS sailed to Caribbean locations in Mexico, the Cayman Islands and Jamaica as well as Labadee (Haiti). MSFotS is owned by Royal Caribbean Cruises, Ltd. an American global cruise company incorporated in Liberia and based in Miami, Florida. MSFotS is flagged Bahamas, registered to Nassau. MSFoTS is operated by Royal Caribbean International which was founded in Norway and is based in Miami. [DG]

	We think it's just a property of water to assume the shape of the container in which it's placed. But what if we're all doing it all the time? Let's think about containers on the high seas. It's hard to count them, even if we know that hundreds fall into abyssal depths every year. They plug into and play with every industrial port in every seaport in every nation, carrying all the objects of our world economy. They make me think about the shared shape of the human global world, the sprawling collective thing we still like to call "culture" even though we know that word's implied opposition to "nature" doesn't hold water any more. What if we've all become container-shaped already? Containerized, as the economists say? What does it feel like to be in a box? [SM]

860900-0000	CONTAINERS (INCLUDING CONTAINERS FOR THE TRANSPORT OF FLUIDS) SPECIALLY DESIGNED AND EQUIPPED FOR CARRIAGE BY ONE OR MORE MODES OF TRANSPORT
	Container, from Latin <i>contineo</i> ("to hold or keep together, comprise, contain") combined form of <i>con-</i> ("together") + <i>teneo</i> ("to hold"). Holding together the world, in millions of intermodal containers. This world is made of boxes, in 53, 48, 45, 40 and 20 foot units: the world of things, that makes this world of trade, that makes this world—these worlds—of us: Containers stacked on transport ships move 90% of cargo worldwide. 18 million containers made a total of over 200 million trips per year. 5,000 container ships are at sea; some are 1,100 feet long—¼ of a mile. My house is the size of a 40' shipping container. My house is filled with 16,000 soccer balls. To the gills. Imagine 10 city blocks of this. A suffocating Pangaea. [M2]

700100-0000 CULLET AND OTHER WASTE AND SCRAP OF GLASS; GLASS IN THE MASS

There is a flotsam of things on my desk at home: old diaries, research notebooks, a bright package of *anchoas peruanas*, favorite books like Stefan Helmreich's *Alien Ocean*, bits of turquoise glass rubbed by sand on beaches I no longer can recall. In place of honor is a Japanese floating glass ball. Unmoored from its fishing nets, it was carried along the Kuroshio Japanese Current, or the Black Stream, past southeastern Japan, and onward to the North Pacific to eventually land on the shores of British Columbia five years later. It's not a big one. It would have held crab nets. Made from recycled sake bottles, it is a watery green with nicks from its time in the blue-black current. It calls of the sea when I am landlocked to my desk. Its magnificent journey moistens dulled eyes. [EP]

You were the one who told me about the seals. I've just come back from the necropsies, you said. Strange lacerations to their faces and blood in their mucus membranes. You carefully worked up the pathology. You were not convinced it was the mustard gas. You still have your doubts, and I respect your professional opinion. But my imagination was already intoxicated. The first report I read about the chemical weapons dumped in the Gotland Deep after World War II told me: "There are dangerous objects in the Baltic Sea inside and outside known locations."

At these cold temperatures, your colleague told me, the mustard gas is like clay. Maybe the seals are looking for food. Maybe it sticks to their whiskers. The chemicals only become active when they come to the surface. We don't know why the seals died. They are already dead in the nets. Time covers it's own tracks. But there is blood around their whiskers. [AN]

701333-0000 DRINKING GLASSES OF LEAD CRYSTAL

On board a super trawler in the Caspian Sea, a fight broke out among pirates. Members of a Russian gang had been toasting their success in catching the last sturgeon with Australian wine served in crystal glasses that sang when caressed by a wetted finger. Penfolds Grange 2011 is a fine wine, fined by isinglass much to the horror of the one vegan on board. Entranced with each other, surfeited with *ikra*, the pirates didn't notice the gang of Kazakh women pirates climbing up the astarboard side of the ship. Throats slashed, their bodies jerked, and they with the glasses fell overboard and sank to the bottom. Lead bodies, and lead glasses adding to the maze of epigenetic toxins. The women finished the rest of the caviar and proceeded to test its reputation as a vascular dilator. It worked for some. [EP]

The earth has been turned inside out. The ground's contents exhumed, all the dead and compressed species now coating the surface. Creating new surfaces. In parts of the Citarum, in Indonesia, which has the unenviable title of being the most polluted river in the world, there is so much plastic waste that the river has become anoxic. That is, there is no, or little, oxygen in the water column. We have wrapped up life so tightly, sealed it off so effectively, that it can no longer breath. [HD]

210690-9998 FOOD PREPARATIONS NOT ELSEWHERE SPECIFIED OR INCLUDED, NOT CANNED OR FROZEN (INCLUDES FISH OIL)

Every morning I spoon a gleaming golden capsule into my mouth and swallow. Fish oil, the bearer of omega-3. According to multitudinous claims, it will make me smarter, less depressed; it's good for my heart, brain and eyes. But I'm eating the ocean. Twenty-five per cent of the global catch of fish is ground into fishmeal to feed poultry and pigs, and into oil for those like me — affluent, middle class in search of the wonders of the sea. The global south forgoes the little fish crucial to their diets so that the global north can have omega-3 fortified bread. Loaves and fishes. [EP]

030351-0000 HERRINGS (CLUPEA HARENGUS, CLUPEA PALLASII), FROZEN, EXCEPT FILLETS, LIVERS AND ROES

Herring was the basis of Scotland's global industry in the late 19th century. Deemed as fish for the poor, they were gutted and cured and put in barrels to travel the British imperial seas. "The Scotch Cure" was exported to the plantations of the West Indies to feed the slaves of Scottish enterprises. In 1860, the traveller and historian Charles Richard Weld came across young fisher girls known in the Doric of eastern Scotland as "herring quines." "The herring lassies covered in fish guts . . . besmattered with blood and entrails and scales of fish as to cause them to resemble animals of the ichthyological kingdom." Following the herring allowed these girls to flee the dour hand of Scottish respectability. When the herring trade was killed off by two world wars, queer fish-girls became sad fishwives. [EP]

050100-0000 HUMAN HAIR, UNWORKED, WHETHER OR NOT WASHED OR SCAURED, WASTE OF HUMAN HAIR

There's nothing worse than the feel of your hair when you get out of the ocean. Whether or not its been washed or scoured, it's tangled and matted and just plain gross. If you "worked" it before immersion, it will come out unworked, and for some time, it will remain unworkable.

Hair is not exceptional in this respect. There are many, many goods that are shipped overseas but that lose their functionality if they actually contact seawater. Automobiles and computers are just a few examples. But hair can be made right again with a washing in warm water, which drains out the shower and into a storm drain and eventually back into the ocean . . . along with a strand or two of fugitive hair that ensures the cycle will never be complete, and which might even muck up the drain. [PS]

841350-0080 HYDRAULIC FLUID POWER PUMPS, NESOI

A hydraulic fluid power pump uses pressure on fluid to move fluid which then transforms pressure into force. In this system, then, fluid is simultaneously the source of movement, the instrument of movement, and the object that is being moved. Lunar cycles, tidal patterns, ocean currents, economic cycles, shipping routes, commodity flows, financial flows, and product cycles all push each other in a universe of fluid forces. Pressure applied at the beginning of the system is translated throughout, creating mobilities that generate forces that generate new rounds of mobility—a tub of global slosh. Economy, ecology, ocean . . . these are all giant hydraulic fluid power pumps. [PS]

“On the waves,” writes political theorist Carl Schmitt, “there is nothing but waves.” But how, then, do you measure a wave? How do you measure something against which there is no background, no datum, no surface? You can measure intensity and shape and height and breadth, but does this really amount to measuring a wave? And even if you know the wave, what does that tell you about the ocean? How can you measure waves in a space where there is “nothing but waves”? [PS]

020629-0000 JELLYFISH, LIVE, FRESH, CHILLED, FROZEN, DRIED, SALTED OR IN BRINE

Jellify the ocean! What would it mean? Imagine it as a process, growing out from a hidden and unreachable gooey center into every sea and every bay. Jelly flows through all the world's currents, flecks its corporeal bits into every storm's coriolan swirl. Will we live to see it? Or just to see enough so that we can imagine the ocean-to-come? It won't span the globe in a sinister flash like ice-nine but slowly, viscously, mostly out of sight. We may not see it ourselves but I believe that people will soon be living happily—humans are happy creatures, sometimes—next to jellified shores. They'll walk next to semi-solid tidal swells, gaze out on seething life. They'll hide their feet from angry stings but welcome the caress of clear body-fragments. They'll find it beautiful, just as I do today. I have to believe it! [SM]

160563-0000 JELLYFISH, PREPARED OR PRESERVED

That September morning in New Jersey, jelly fragments were thick in the water—not stingers, but marble-sized chunks of jellyfish-body, scattered and swirling. A few whole moon jellies floated among them, but mostly just bits. I swam through them, pushing into the cloud with a tactile sense of the ocean's living, strange, inhuman bodies. Jellyfish are the ocean's future. They thrive in the seas that are coming: oxygen-deprived, warm, acidic, depleted of fish. They violate our long history of ocean aesthetics. But swimming through the jelly-cloud early that morning, with a solitary fisherman casting just up the beach under a cloudless sky, swimmers and jellies and fishermen managed. The feel of the jellies between my fingers was foreign, slimy, disturbing—but something I could get used to. [SM]

Denmark is the only Baltic country to compensate fishermen who report clumps of mustard gas in their fishing nets. Would you believe Danes are the only fishermen who find clumps of mustard gas in their fishing nets.

Do you remember that time, south of Liepaja (or was it Nida?), and we spent the whole day walking slowly along the beach. Eyes peeled for those tiny jewels of earwax: golden brown and milky yellow, tree-blood worked and worked by the years into amber. If you were lucky you found one with a spider, or a fly. I still have a handful in that small wooden box with the bird on it.

The problem is not so much with mustard gas, but the phosgene. When it washes up, it composes itself as a small, hard, unevenly shaped lump of cloudy golden precious. [AN]

901320-0000 LASERS, OTHER THAN LASER DIODES

Aaron gave me an extra laser pointer he found in his closet while preparing to leave New York. It's in a fuzzy beige box that says LASER POINTER. It was probably made in China but that is just a guess because most things are. If my guess is right then it probably came by way of the East China Sea, the Sea of Japan, the Pacific, the Panama Canal, the Caribbean Sea in 31 days and 10 hours or more, and I guess it was used for an art project and I probably won't use it. It has no batteries. [RS]

981000-7500 LIFEBOATS AND LIFE-SAVING APPARATUS FOR LIFE-SAVING INSTITUTION

Last November, we waited in vain for signs of the vanished El Faro, a US-flagged, 730-ft-long container ship with 28 American and 5 Polish crew members, lost in the ravages of Hurricane Joachim, in a nautical tragedy reminiscent of another era. Disappearances on the high seas are not uncommon today, even if they barely make the news. It is quaint how our compunction increases with our proximity to the catastrophe. The stakes are higher, perhaps, for ships flagged to "ports of convenience," whose dubious labor practices have been detailed in a series of recent *New York Times* articles. Also in the book *Ninety Percent of Everything: Inside Shipping, the Invisible Industry That Puts Clothes on Your Back, Gas in Your Car, Food on Your Plate* by Rose George. But those are faraway ships staffed by foreign crews. [DG]

There was a recent scare in Indonesia. A story spread that rice being sold in markets was not rice at all. Instead, it was potato starch mixed with polyethylene. The story ran in many newspapers across the country and on the internet. There were reports from different districts, saying some people were sick and had gone to the hospital because of the plastic in their guts. The story, as it turned out, was false. Or, rather, the story was true, but it was about the wrong species. Everyday plastic is eaten, mistaken for food, as it appears in the normal locations, with barely decipherable differences from the regular fare. It is eaten in by corals and turtles and fish and whales and birds. [HD]

When I was six I sat on the bottom of the swimming pool and you tapped on the ladder and the thrumming of your hands was all around me. In my mouth, my hair, pressed into my skin. My fingery ears sought you out, but a sense of space and proprioception dissolved in our personal blue.

Low-frequency active military sonar emits sound pressure of 120dB (a level that would damage our human ability to hear) for 3.9 million km². Mid-frequency sonar can emit continuous sound above 235 decibels, which is mostly like a rocket blast-off. High-intensity sonar and seismic waves snake along the ocean floor seeking oil and gas deposits. Background noise in the ocean doubles every decade mostly from commercial shipping traffic.

Cetacean deaths sometimes surface as mass strandings, but necropsies show extensive internal bleeding in cranial regions.

What is the skin of the undersea? An open sore, a gaping wound. Oceanic synaesthesia. [AN]

The race to the sea floor is on. Nautalis Minerals will start mining manganese nodules in 2018. It's happening so fast. But the deep sea has its own temporality. Oceanographer Tony Koslow states that manganese nodules grow "extraordinarily slowly, only a few millimeters per million years" (*The Silent Deep* 164). Once thought to harbor "living fossils"—a refuge from terrestrial time—the deep sea will, no doubt, soon be ravaged by mining. Jennifer Devine et al. report in *Nature*, "Deep sea fish are highly vulnerable to disturbance because of their late maturation, extreme longevity, low fecundity and slow growth" (29). While nodule habitats are "among the most stable on Earth and are dominated by very small, fragile deposit feeders," a single mining operation could, over 15 years, "immediately kill most of the fauna," in an area "half the size of Germany" (11). When whales have gone the way of mermaids and dugongs, we shall hold dear these strips of jerky and sing songs of tenderness.

“The whale it came so close that it almost tipped the boat

The captain raised his spear and he rammed it down its throat

The whale it gave a mournful cry and lifted it’s great tail

And brought it down a smashing their wee boat. Was that a gale?”

Fielding and Dyer, “The Whale” (1972) [MZ]

A Florida attorney advocates farming manatees to save them, contending that “Socialism is killing manatee”: “Capitalists can farm manatee by fencing them or by the more modern method using ‘homing’ tags (transponders) to own and track manatee as private property” (<http://rexcurry.net/manateefarm.html>). Bloggers report office-cooler debates over whether manatees are white meat or dark meat. People are dying to know what the endangered mammal tastes like. The list of “5 Things You Can’t Eat But Wish You Could” includes the manatee. Jennifer Welsh reports, in “Humans’ Taste for Dolphins and Manatees on the Rise”: “At least 87 species of marine mammals—including dolphins, porpoises and manatees—have been served up in 114 countries.” (<http://www.livescience.com/18109-dolphins-seals-eaten.html>). At Spearboard.com, you can find recipes for “braised manatee,” and “baked manatee flippers with veggies.” Meanwhile, manatees themselves forage quietly, gently, on seagrasses, manatee grass, algae, alligator weed, water celery, water lettuce, floating hyacinth, pickerelweed, widgeon grass, sea clover. Chewing. [SA]

611231-0000 MEN'S OR BOYS' SWIMWEAR OF SYNTHETIC FIBERS, KNITTED OR CROCHETED

Swimwear's a bit of a contradiction, but I wear it all the time. The trajectory of the word's first half plunges me naked into the world's body. The defensive posture of the second half of the word hides parts of my own body. Knitting is an ancient organic practice, part of the long poetic entanglement of humans and sheep. "Synth" names a process because of which which we don't have to rely on animals or shepherds or eclogues. Ye goat-herd gods! What confabulations do I sing to myself in that immersive instant when I dive into the world's biggest body? What echoes might redound if I listened with whale's ears, endlessly open, inviting and invited? [SM]

Sometimes listed: "Other mineral waxes, similar products obtained by synthesis." "Obtained by synthesis" must be a metaphor. Not minerals—we know what they are. Bones of our planet, hard mixtures, these aren't things that we make but things that we use. The thing we do, the ways we've always been doing it, is synthesize things we need but can't find. Where exactly is the magic of synthesis, the instant or turn or leap of change, when the thing we have extracted becomes a thing of our creation? Is synthesis always violent? Is it what the ocean does silently to itself, hidden in darknesses we can't see? Does the sea make commerce with itself, a ceaseless churn of exchange and flow that's the real model for all our tiny transactions, a fundamental global wax, a softness, a lubrication, if only we could press insistent fingers into its thickness? But the guy from the Defense Research Institute tells me the mustard gas, the tabun, the corroding canisters, are not what we really need to worry about. The cold temperatures and the work of time and the materiality of the chemicals — all of this means that this thing is mostly keeping a lid on itself. Fertilizer, he says. That's what we need to worry about. The sea can't breathe. (*"I can't breathe": a refrain for the Anthropocene.*) Slow violence is not spectacular, but it's what gets you every time. [AN]

160553-0000 MUSSELS, PREPARED OR PRESERVED

Mussel is to Baltic what canary is to coal mine. Blue mussels used as sentinel species for studying the accumulation of chemical warfare agents (CWAs) in the sea exhibited highest biomarker responses at the dumping hotspots. It is thus likely that mussels at 65 m were exposed to CWAs and other contaminants present in the sediment or near bottom water. However, these mussels were also exposed to lower oxygen concentrations that could induce the change from aerobic to anaerobic metabolism and contribute to the variation in the observed biological responses. See also 9306900020: GUIDED MISSILES. Or just show us some mussel. [AN]

051199-3600 NATURAL SPONGES OF ANIMAL ORIGIN

Monsieur Pierre Arronax, enjoys the view from Captain Nemo's Nautilus: "What new specimens of submarine flora and fauna did I admire under the brightness of our electric lantern! There grew sponges of all shapes, pediculated, foliated, globular, and digital. They certainly justified the names of baskets, cups, distaffs, elk's horns, lion's feet, peacock's tails, and Neptune's—gloves, which have been given to them by fishermen, greater poets than the savants" (Jules Verne, *20,000 Leagues Under the Sea*.) A century and a half later, the deep sea remains mysterious and sensationalized, as journalists report that new species of "killer sponges" have been discovered in the depths, some of which engage in peculiar sexual practices. Charismatic megafauna may charm at the surface and on land, but down here, weirdness reigns. (Just google "weird deep sea.") [SA]

<p>And I forget how the past always creeps, wily and silent, into the future. When we are about to leave Gotland, you buy me a copy of the local news magazine. "Hotet mot Gotland," it says, as artistically rendered military helicopters chug across the front cover. You translate (me, still amazed how quickly you learned Swedish). Because of the Ukraine situation, they were starting to think they decommissioned the tanks here too fast. Bring them back, they said. Europe must be defended. This tiny piece of rocky outcrop in the middle of the Baltic Sea. I wonder if it will sink beneath the weight of all this vulnerability. [AN]</p>

Sixty miles south of Labadee, in Port-au-Prince, thousands fight over food and water. In Labadee, thousands of foreign tourists vacation in their own private paradise. But they are also helping with the recovery efforts by spending their money in the "traditional Haitian market" located on the Labadee grounds and staffed "by real Haitians." Of course Royal Caribbean faces criticism for continuing to allow paradise to happen so close to disaster. Their error, according to the publication ad age, is simply in trying to combine commerce and relief. It seems crass. Had RC come in with a ship as a humanitarian base (or allowed their dock to be used by vessels engaged in the relief efforts) rather than a PR campaign, it would not have become "one of those narratives that tend to linger around a brand." 630259-3000 OTHER TABLE LINEN OF NESOI TEXTILE MATERIALS

Marina gave me a small dish cloth when she came back from Portland, Oregon, not Maine. It has no label on it but it's soft and probably linen and because it has a black bear printed on it in the style of a woodcut I think I'm supposed to assume it was probably made locally in Portland. It's folded up in a drawer in the kitchen and it's white so I don't use it but when I open the drawer to look for the scissors it's there and so I look at it. [RS]

Imagine a sparkling day on Sydney's Harbour . . . eating creamy Sydney rock oysters and drinking a glass of fine Australian white wine with a light warm salty breeze on your face. There's 500 gegalitres of water in the Harbour, an amount that is called one Sydharb. Below the surface swim some 586 different species of fish. Because of the untreated nitrogenous-filled storm water that gushes the poisons of the city into the sea —every year 500 gegalitres goes into the Harbour —plankton are flourishing, which in turn means the fish are too. For the moment. The fish are toxic to their predators, especially including humans. We are eating the fertilizers we sow. [EP]

<p>It's the impulse to put one thing inside another thing that's working here. A sexual impulse, maybe, and also a way of hiding some things from a ravenous world. This category excludes "cartons, boxes and cases, of corrugated paper" but includes "records sleeves, of paper, paperboard, cellulose wadding or webs of cellulose fibres." We must make meaning out of all differences! Sleeves promise a tight fit, no jangling or bouncing around while in motion. They wrap around discs of black vinyl that they hide from the light and from scratches that would unpattern the patterns that have been carefully constructed and pressed into the record, in order to preserve a series of sounds. There is no ocean. There is water, and salt, and microbes, and bacteria, and container ships, and human bodies, and fish, and plants, and car parts, and lighters, and toothbrushes, and persistent organic pollutants, and sharks, and pesticides, and fertilizers, and paint, and molluscs, and corals in aqueous medium. Some of these things dissolve, or will dissolve. Some do not. The ones that do not are sometimes called hydrophobes. These are the molecules, derived from oil, that become your comb or water bottle or holiday centerpiece or tight jeans that make your ass look good. They hate the water. They are not watery beings. And because of that they will continue to persist for an unspecified period of time that we sometimes call "in perpetuity" at the bottom of this aqueous medium. [HD]

It grips their feet when they stand on waves. What a strange and wondrous thing to do! Because it turns out that they can do it, stand on those moving, curling, tumbling things. It's all in the connection, the smooth boards, the timing, well-trained eyes, legs, and arms. Somehow I'm thinking of their feet, awkward stubs jutting at almost right angles, often hidden in the swirl. To make their feet grip rather than slide in the wetness, they paint paraffin wax on the gritty board-top before paddling out. If it's oil too—if everything is a petro-thing—do we depend on it to stand erect, poised amid so much global motion, looking out and up with steel-grey eyes? [SM]

Mare Liberum, or "Freedom of the Seas," a dissertation by Hugo Grotius, is recognized as the first legal argument toward keeping the sea open to all. Published in 1608/9, first anonymously, just to test the waters, it is subtitled: "A defense of the freedom of the seas, or the right which belongs to the Dutch to take part in the East Indian trade."

But for Grotius, the salient fact is not so much "open seas" as "seas open to the Dutch" and others thought to have something to do with nations. It is a freedom already in opposition to national or territorial waters. Grotius, whose dying words are: "By undertaking many things I have accomplished nothing," accomplishes much. The sea becomes a commons, like air, at least between nations, because at the time, there are only nations. Perhaps individuals don't exist yet. [DG]

271210-0000 PETROLEUM JELLY

When I was a teenager I read a story about a boy, a city, two maps, and rockets that exploded with killing force. The first map showed all the places in the city where the boy got a hard-on. The second marked the holes in the ground or in buildings where rockets detonated after being fired into the city from across the sea. The story took place during the War. It turns out—but you’ve guessed it already, right? even if you don’t know this story?—that the two maps were the same map. The poor boy was “in love—in sexual love—with his own death.” It makes me think of oil and lubrication, of the planet we’re building and our desire to penetrate it. What’s petroleum but another form of future-seeking jelly? [SM]

But it's not true that it's just the corals and turtles and fish and whales and birds that are eating the plastic. When you distill the sea, you distill everything in the sea. And after the water evaporates salt is left, but so are all the other chemicals and particles that find their way into the water. A recent study found that salt contains pieces of micro-plastic. These are tiny pieces of plastic that are floating around in the oceans, in huge concentrations. They come from our synthetic clothes, which release over 1000 microfibrils with every wash; from cosmetics and toothpaste that contains "microbeads"; and from all the other bags and chairs and dildos and take-out containers that we no longer want and that gradually erode with time. Bruce Mowry, a city engineer for Miami Beach, recently suggested that to solve the city's constant flooding—a problem not just because Miami Beach is barely above sea level, but because all of South Florida is made up of limestone, porous limestone, which means that water seeps in from below—he wanted to find some kind of resin to fill up the holes in the limestone, to make it impermeable. As the sea levels rise, and are predicted to cover much of South Florida in the next fifty years, this plastic-filled limestone could break off and float up, becoming a buoyant island that could drift around in the sea. Perhaps this is where all climate change deniers could go to live out their final years. [HD]

My grandfather worked his whole life for Dupont. He began his career as a chemical engineer and then became a manager. Much of my own life has been shaped by this company, directly through the privilege that his relative wealth earned for my mom and her siblings, and from the easy-at-hand consumer, industrial and medical goods that Dupont produces. My grandfather is now 92 years old. The world that he thought he was creating is not the one he lives in. He now declares himself a communist and urges all us grandkids to become farmers. His forward-looking dreams have ended back where he started, but we cannot recreate from the nostalgia of an old man. Instead, we have to live with the chemicals Dupont continues to leave behind and learn to become responsible for our inheritances, both before and behind us. [HD]

The “Statistical Classification of Domestic and Foreign Commodities Exported from the United States” lists substances, objects, even living creatures, labeling them each with a code, a numerical designation that enables them to be tracked, enumerated, placed in a grid or graph or table. The codes manifest capitalist abstraction, expunging materiality, history, causes, effects—the very stuff of ethics and politics. The liveliness of the world vanishes into numbers that obscure rather than transmit something tangible about what happened, where, and to whom—such that this particular thing is here now. This is not Bruno Latour’s “circulating reference,” conducting something tangible, but data that does not divulge distressing realities. Can we inhabit these codes, find ourselves within them, tracing trans-corporeal relations (Alaimo), between the number, the stuff the number designates, the successions of exploitation, and the material landscapes of our lives? 051191-0090 PRODUCTS OF FISH OR CRUSTACEANS, MOLLUSCS OR OTHER AQUATIC INVERTEBRATES; DEAD ANIMALS OF CHAPTER 3, UNFIT FOR HUMAN CONSUMPTION, NESOI

“Bycatch” rates are terribly high in industrialized fishing, and may include birds, dolphins, fish, and turtles. Bycatch are not the fish being fished, but the ones that got in the way. Category 051191 suggests that even fish “waste” might be transported for a purpose, however, rather than being tossed back into the sea as garbage. But is “rendering” everything—for human use if not direct consumption—preferable, when the sea has its own means of processing its dead? Nicole Shukin writes about gruesome slaughterhouses tours in which even the squeal of the animal was rendered into capital as entertainment value (*Animal Capital*). More lovely are the “whale falls,” cetacean carcasses that sink to the sea floor and become elaborate ecosystems, feeding hundreds of species for as many as fifty years. Who/what will the fish bodies of 051191 feed and for how long? [SA]

Landscape architect Pierre Bélanger, an open-ocean swimmer, employs the term "Oceanic Turn" to signify how the idea of the ocean has been reinvigorated in the cultural imaginary. For Bélanger, the oceanic turn has created new fields for study and exploration, but also for exploitation and regulation. The turn, it turns out, is a bit of a downer. The ocean is not perceived as a space of liberation but of danger, threats, and fears, driven by media attention on everything from ocean plastics, piracy and ocean migration to mass sealife extinction. Following a series of New York Times reports on some of these many perils, we learn that the UN will soon announce new international legal structures to police and control the sea. The secretive Trans-Pacific Partnership (TPP), a proposed trade agreement between twelve Pacific Rim countries, aims to enact controls in the same vein. [DG]

In the 1961 preface to *The Sea Around Us*, Rachel Carson calls the sea: "a realm so vast and difficult of access that with all our efforts we have explored only a small fraction of its area." Historically, the sea has appeared as unrestricted space, open to adventure, chance, exploration and freedom, but also slavery, exploitation. The sea is interconnectedness, epitomized by the water cycle itself. The sea becomes rain and the water we drink or wash our clothes with flows back into the sea carrying antibiotics and microplastics and viruses that won't break down. Not salt water, but sea water. Taken from a sea or actually in the sea currently. Not taken from the place where the river empties into a sea (mouth) but from the sea (body). The sea, then, is some gradually lessening percentage of seawater. [DG]

030811-0000 SEA CUCUMBERS, LIVE, FRESH OR CHILLED

Sea cucumber is the popular euphemism for a soft-bodied bottom dweller of the class holothuroidea of which there are 1,500 known in demand in processed dried form as well as frozen and fresh.

The universal code Sea Cucumber unnames more than it names: bêche de mer, bicho do mar, namako, gamat, sea worm, sea spade, sea pudding, Beechly Mar, beach la mer, biche de mer, mollusca, sea ginseng, ta'unga, bouche de mer, sea grub, outres de mer, the anomaly, trepang, dri, animal-fish, sea slug, chalk fish, lolly fish, teat fish, loli, tarasea, vula, bankolongan, keeskeeesan, talepan, munang, sapa-tos, lowlowan, balati blanco, matan, 海參, bichole, bestulus.

Bislama (from pseudo-French bichelamar) is the pidgen developed in the nineteenth-century trade and is today an official language of Vanuatu. [EG]

030811-0000 SEA CUCUMBERS, FIT FOR HUMAN CONSUMPTION, LIVE, FRESH OR CHILLED

Hoping to score a best-seller with his 1838 *Narrative of Arthur Gordon Pym*, Poe picked out and incorporated passages from numerous sources, including this one from a ghost-written pot-boiler of the exotic South Seas:

“[The sea cucumber] is abundantly gathered in the coasts of the Pacific islands, and gathered especially for the Chinese market, where it commands a great price, perhaps as much as their much-talked-of edible birds’ nests, which are probably made up of the gelatinous matter picked up by a species of swallow from the body of these molluscae . . . the sharp bill of which, inserted in the soft animal, draws a gummy and filamentous substance, which, by drying, can be wrought into the solid walls of their nest.” [EG]

When Val came to visit New York from Orlando she brought me a pink ceramic frog. Its mouth is open and unglazed inside. A little gold sticker on the bottom says MADE IN MEXICO. It probably came by way of the Gulf of Mexico in 1 day and 23 hours or more. I am on a plane back from Mexico now, where I went with Val. We saw a pink ceramic frog that was almost the same but not quite, a pile of them actually, each painted by hand, but she said none are as good as the one she gave me and that the shop we were in not as good as the one in the Mexico Pavillion at Epcot, where she got me the frog from Orlando that sits by the the small plastic dolphin from Kelsa and the small plastic lion from no one. Sometimes I put something in its mouth, like a pen or a flower, and it holds it. [RS]

The "Statistical Classification of Domestic and Foreign Commodities Exported from the United States" confronts us with detached, immaterial, numerical codes that bury so much. Where do all these minerals, for example, come from? Who mined them and under what conditions? Who profited? Who lost their land or their access to clean water? What habitats and ecologies were destroyed, what animals were killed? Tantalum, Tin, Tungsten and Gold are designated as "Conflict Minerals," because their trade has ignited armed conflicts in the Congo, killing 5.4 million people. Electronic devices—of which there are more and more—must have such minerals. A group called "Enough" urges people to purchase certified "conflict free electronics." "Global Witness" features the faces and words of Congolese miners and activists, advocating for international legislation that would expose supply chains, fleshing out consequences and connections. Tim Burton, known for his stylish, macabre fantasies, wrote *The Melancholy Death of Oyster Boy and Other Stories*, which includes "Roy, The Toxic Boy," an amusing little poem about a boy who loves asbestos, aerosols, and auto exhaust. His passions kill him. What kills me, however, is that you can buy a 7-inch PVC Toxic Boy toy. Or Toxic Boy in a set with two other toys. This is beyond ironic. Because Toxic Boy is, of course, made from one of the most toxic forms of plastic—PVC. The choking hazard warning is prominently displayed, but despite the skull and crossbones on his shirt, no one warns that Toxic Boy is himself—say it!—toxic. If children suck on him or inhale the fumes he can't help but offgass, well, is it too much to say that they flirt with death? [SA]

A small plastic dolphin was sent to me in Oakland by Kelsa in Paris by airmail. CHINA is written in raised letters on its belly. It was probably shipped by way of the South China Sea, through the Malacca Strait, the Indian Ocean, the Gulf of Aden, the Gulf of Suez, the Mediterranean Sea, the Alboran Sea, through the Suez Canal, and the Atlantic in 21 days and 16 hours or more. Before it was a dolphin it was probably just plastic, which probably came to China from Saudi Arabia or maybe from South Korea. When I moved to New York I took the small dolphin with me on the airplane and held it for good luck, and now it sits on the shelf by a small plastic lion and together they do nothing. [RS]

Hugo Grotius: "The air belongs to this class of things for two reasons. First, it is not susceptible of occupation; and second its common use is destined for all men. For the same reasons the sea is common to all, because it is so limitless that it cannot become a possession of any one, and because it is adapted for the use of all, whether we consider it from the point of view of navigation or of fisheries."

Mare Liberum denies the Portuguese the right to "title by discovery, by occupation, by papal gift or by war," and concludes therefore that the Dutch had, as against the Portuguese, the right to trade freely with the East Indies and, if necessary, in order to do so, wage war. There were, and are, of course, disputes on this point. [DG]

There is a great deal of debate about whether the size of the fishing vessel makes a difference to the sustainability of fishing. A few years ago the world's second largest super trawler, the Abel Tasman (the renamed FV Margiris) was banned from Australian waters under a hastily passed amendment to Environmental Protection and Biodiversity Conservation Act. This was greeted as a victory for several ENGOs whose campaigns had whipped people into a frenzy. Marine scientists were not so happy. On their recommendations, the FV Margiris was only entitled to the same amount of quota – the set amount of how much can be caught per year – as any other boat. In the science of sustainability it doesn't matter whether it's one trawler or several boats. Science notwithstanding, super trawlers vacuuming fish from the sea tears at the heart. [EP]

890610-0000 WARSHIPS (INCLUDING SUBMARINES, TROOPSHIPS ETC.)

The sea today is increasingly subjected to acts and events leading to forms of enclosure. The ocean's surface is no longer quite the vacant terrain of Rachel Carson's sea-view. Overfishing, shipping, and pollution have begun to enclose upon the long held idea of the "open ocean." Along with the container ships, filled with plastic things brought to plastic people, the ocean's five plastic gyres are increasing in size. With close to 70,000 commercial vessels on the sea on any given day and over one million seafarers employed by the shipping industry, many parts of the ocean are teeming with activity, at least on the surface and in the most used shipping routes. And this doesn't include warships. The US Navy is comprised of 273 ships, of which roughly 85 will be at sea on any given day. [DG]

In 2009, Operation Demeter seized more than 30000 tons and 1,500 pieces of illegal hazardous waste, much of destined from Europe to Asia and Africa. Customs administrations did something for the environment, for a change. It's time to take the Leap! <https://leapmanifesto.org> [RW]

010612-0100	WHALES, DOLPHINS AND PORPOISES (MAMMALS OF THE ORDER CETACEA); MANATEES AND DUGONGS (MAMMALS OF THE ORDER SIRENIA); LIVE
	Swimming with manatees in a frigid West Florida river, full of alligators, we risked life and limb just to glimpse them in their own world. Who wouldn't adore the peaceful, portly manatees? Emma, surfacing, snorkeling mask awry, exclaims, "I watched a baby munching grass!" Order: Sirenia. Enchanting sirens, indeed. But manatees migrate, moving slowly, distressed, no doubt, by noisy speed boats. We four snorkelers kept a respectful distance but Florida theme parks sell the touch of the manatee and anonymous bloggers report relishing the babies as steak. Why would live manatees be shipped across seas? Do they survive exile and encratement to, mournfully, entertain? The IUCN reports many starve in captivity. And by what twisted logic can pacifist manatees appear in Military.com's headline, "New Marine Airfield Threatened by Japan's Manatee." Conserving the docile dugong, they report, threatens "U.S. blue water supremacy in Asia." [SA]

300290-5110	WHOLE HUMAN BLOOD
<p>Environmentalists often cite the statistic that both the earth's surface and the human body are about 70 percent liquid. For millennia, the body and the planet have existed in a metaphysical harmony of liquid flows: bodies move the earth's water from place to place, and oceans move the earth's bodies. But if blood is removed from the human body and transported by sea, what will be next? Will we move oceans? If so, it will almost certainly be associated with the spilling of blood, which will end up in the ocean, mixing with water to support the ships that carry blood—both commodified and in vitro—to distant lands. 100890-0120	WILD RICE
<p>Ojibwe/Anishinaabe people call "wild rice" manoomin or mahnomin. It grows in places now called Michigan, Minnesota, and Wisconsin. The traditional harvesting method involves canoes. Nonnative settler colonialists would not recognize the word "manoomin." Fitting, perhaps, since that may not be what we've been eating. Indian Country Today tells us, "True Wild Rice Isn't What You Think It Is—It's Better." Manoomin has been taken, genetically altered, transplanted to other regions, and harvested by other means. Meanwhile, manoomin is threatened by motorboats, sulfates from mining, and climate change. Oil pipelines, through sensitive waters, are proposed. Manoomin has fed peoples, cultivated stories, and fostered ways of life. It is nutritious. And it is crucial for ecosystems, improving water quality and creating habitats and food for birds, fish, and mammals. A pamphlet calls "wild rice" an "ecological treasure." They must have meant manoomin. [SA]</p>	

920590-6000	WIND INSTRUMENTS, NESOI (INCLUDES KAZOOS)
<p>The kazoo is the baleen whale of the musical world. The distinguishing feature of both is the membrane, a semi-permeable screen through which input (air, microorganisms) passes and life/sound originates. Like the whale, the kazoo is brash and aggressive but also a bit silly and lumbering. Both stridently assert their presence, but in a way that's so non-threatening it's almost, well, goofy.</p> <p>Melville derided the stylized whale found on tavern placards, but this image persists in seaside tourist traps around the world . . . the kinds of places where you'll also find kazoos. In a sea of affect and atmosphere—treacherous undertows and tumultuous undertones, tumultuous waves and soaring symphonies, evocations and vocalizations—the kazoo and the whale remind us that there is still mass. There is still the object. There is still presence. And it's not always pretty. [PS]</p>

Textiles make alliances. Warp and woof entangle together and build mutual supports. These things last and matter. They protect fragile bodies and civilizations. What if we learned that Bruno Latour's mother had been an expert seamstress and the child had sat at her knees in awe? What if his hidden inspiration isn't the masculine prestige-networks of the scientific laboratory that he's for so long been struggling to socialize, but a household practice of creation and repair that starts with women, thread, and needles? It's not hard to imagine. Which one is the master-holder of our oldest truth, the wayward sailor who scattered violence and its seeds across so many islands, or the immobile wife, surrounded by no one but her own brilliance, who picked the shroud's threads from the work night after night? [SM]

611241-0000 WOMEN'S OR GIRLS' SWIMWEAR OF SYNTHETIC FIBERS, KNITTED OR CROCHETED

There was a time when swimming was deemed medicinal for women in the grip of certain maladies, though the suits they wore then aren't much like the ones in this container. Bathing costumes were built for defending against hostile male eyes and waves. Elaborate and frill-filled, they would surround female flesh as women walked, sometimes further surrounded by a box or mobile house-container inside which they'd walk into the surf. Colder was better, and sometimes these women hurled themselves or were thrown by their doctors into bitter waters. The shock cleaned, startled, opened — or at least that was the theory of the day. It's not what my daughter thinks about when she picks out a swimsuit, but I think about it when we swim together in cold water. Swimming is transformation, a tiny escape from terrestriality, a touch of inhuman fingers. What should we wear? [SM]

HOW TO SHIP OTHER PRODUCTS

If the cargo that you wish to ship is not readily found in the HS code, there are ways around this.

1. Find a tariff code in which your article fits, if not examined too closely. Some products are especially suited for this approach, including: Hazardous waste; Electronic waste; Illegal opiates; Weapons; and Endangered species.

NOTE: Those shipping electronic waste should refer to the online pdf published by the World Customs Organization: "Correlation Between the Product Coverage of Selected International Conventions and the Harmonized System."
2. Misrepresent the contents of your container on the Bill of Lading or Shipping Manifest.
3. Load Groupage: Carefully conceal your shipment among a large volume of something else. Many containers do not contain full shipments from one shipper. Make sure your consignee pick-up at the end destination is aware of the container number, and the accompanying shipment's destination and ground carrier.
4. Hijack a container awaiting shipment and build a false floor.
5. Take your chances! In most countries, under 3% of imported shipments in containers undergo inspection.

Examples of tariff codes which provide cover:
